## AMENDMENTS TO THE CLAIMS

1.      (Currently amended) A portal server for a network of computing devices for aggregating application issue data from a plurality of independent software vendors (ISVs), the portal server being accessible by one or more application developers of the ISVs via a network computing device, the portal server comprising:

a data interface for accessing a plurality of application issue data sources for obtaining application issue data regarding one or more applications associated with each of the ISVs, the application issue data including blocking issue data, quality issue data, and compatibility fix issue data;

a network interface accessible by each of the one or more application developers; and

an aggregation module for aggregating the application issue data by application and for presenting to each of the one or more application developers via the network interface a customizable user interface that presents the aggregated application issue data regarding only the one or more applications associated with that ISV and ~~omitting~~ omits the application issue data for applications not associated with that ISV, the presentation including the names of the applications associated with the ISV, a number of blocking issue data items associated with each application, a number of quality issue data items associated with each application, and a number of compatibility fix issue data items associated with each application, wherein

each application name is a hyperlink to an issue list comprising application issue data for the corresponding application,

each number of the blocking issue data items is a hyperlink to an issue list comprising blocking issue data for the corresponding application,

each number of the quality issue data items is a hyperlink to an issue list comprising quality issue data for the corresponding application, and

each number of the compatibility fix issue data items is a hyperlink to an issue list comprising compatibility fix issue data for the corresponding application.

2.      (Currently amended) The portal server according to Claim 1, wherein the aggregation module is further operable to prioritize the application issue data according to at least one criterion at the request of an application developer.

3.      (Previously presented) The portal server according to Claim 2, wherein the at least one criterion includes one or more criteria selected from the group consisting of issue ID, application name, application version, issue type, issue priority, operating system, and number of issue reports per issue.

4.      (Previously presented) The portal server according to Claim 1, wherein the plurality of application issue data sources comprise a database of logo certification test results performed on at least one application by a party other than the application developer and a database of user-reported computer crash data.

5.      (Previously presented) The portal server according to Claim 4, wherein the plurality of application issue data sources further comprise an additional database of application experience test data.

6.      (Currently amended) A web portal user interface for presenting application issue data to a user comprising:

a search pane for user entry of at least one search term, whereby entry of at least one search term coupled with a run command will cause a search to be executed of aggregated application issue data; and

a task pane for user selection of a format for display of application issue data; and a content pane for display of application issue data, the application issue data including blocking issue data, quality issue data, and compatibility fix issue data, the display of the application issue data including the names of the applications associated with the ISV, a number of blocking issue data items associated with each application, a number of quality issue data items associated with each application, and a number of compatibility fix issue data items associated with each application, wherein

each application name is a hyperlink to an issue list comprising application issue data for the corresponding application,

each number of the blocking issue data items is a hyperlink to an issue list comprising blocking issue data for the corresponding application,

each number of the quality issue data items is a hyperlink to an issue list comprising quality issue data for the corresponding application, and

each number of the compatibility fix issue data items is a hyperlink to an issue list comprising compatibility fix issue data for the corresponding application.

7.    (Original) The web portal user interface according to Claim 6, wherein the user is an application developer of one or more applications, and the application issue data available to the user in the content pane relates to those one or more applications and omits data related to applications other than the one or more applications.

8.    (Original) The web portal user interface according to Claim 7, wherein the task pane contains a listing of available formats.

9.    (Original) The web portal user interface according to Claim 8, wherein the listing of available formats comprises a summary format.

10. (Original) The web portal user interface according to Claim 9, wherein each application issue has associated therewith number of reports of that issue, and wherein the summary format comprises a graphical illustration of the number of reports associated with each of a subset of application issues, each application issue in the subset having associated therewith more reports than any of the remaining issues not in the subset.

11. (Original) The web portal user interface according to Claim 8, wherein the listing of available formats comprises a format wherein each of the one or more applications is listed and is visually associated with information regarding application issues for that application.

12. (Original) The web portal user interface according to Claim 11, wherein the information visually associated with each of the one or more applications comprises an indication of the total number of issues associated with that application.

13. (Original) The web portal user interface according to Claim 12, wherein the applications issues each have one of a plurality of types, and wherein the information visually associated with each of the one or more applications comprises an indication of the number of issues of each type associated with that application.

14. (Original) The web portal user interface according to Claim 11, wherein the information visually associated with each of the one or more applications comprises an indication of the total number of issues associated with that application when used in conjunction with an indicated operating system.

15. (Original) The web portal user interface according to Claim 8, wherein the listing of available formats comprises a format wherein all application issues associated with the one or more applications are presented.

16.     (Original) The web portal user interface according to Claim 15, wherein each application issue has an identifier, and wherein within the format wherein all application issues associated with the one or more applications are presented, the application issues are grouped by application issue identifier.

17.     (Original) The portal according to Claim 6, wherein the search pane comprises selectable search filters.

18.     (Currently amended)  A method of presenting application issue data regarding one or more software applications to a developer of the one or more software applications comprising: gathering application issue data from a plurality of data sources;

        aggregating application issue data such that application issues pertaining to the same application are grouped together, the application issue data including blocking issue data, quality issue data, and compatibility fix issue data; and

        presenting the aggregated application issue data visually to the developer of the one or more software applications by providing a user with selectable control for altering the order in which the application issues are presented.

19.     (Original) The method according to Claim 18, wherein gathering application issue data from a plurality of data sources comprises gathering the application issue data from a database storing at least one item of user crash report data and a database storing at least one item of test report data.

20.     (Canceled)

MSFT\25728AM2.DOC

21.    (Currently amended)  A method of presenting application issue data regarding one or more software applications to a developer of the one or more software applications comprising: gathering application issue data from a plurality of data sources;

aggregating application issue data such that application issues pertaining to the same application are grouped together, the application issue data including blocking issue data, quality issue data, and compatibility fix issue data; and

presenting the aggregated application issue data visually to the developer of the one or more software applications by presenting a subset of the data in a visual page and presenting a user-selectable page control for accessing one or more pages of remaining data.

22.    (Original)  A computer-readable medium having stored thereon computer-executable instructions for performing the method according to Claim 18.

23.    (Currently amended)  An apparatus for presenting application issue data regarding one or more software applications to a developer of the one or more software applications comprising:

means for aggregating application issue data such that application issues pertaining to the same application are grouped together, the application issue data including blocking issue data, quality issue data, and compatibility fix issue data;

means for gathering application issue data from a plurality of data sources; and

means for presenting the aggregated application issue data visually to the developer of the one or more software applications by providing a user with selectable control for altering the order in which the application issues are presented.

24.    (Currently amended) An apparatus for presenting application issue data regarding one or more software applications to a developer of the one or more software applications comprising:

means for aggregating application issue data such that application issues pertaining to the same application are grouped together, the application issue data including blocking issue data, quality issue data, and compatibility fix issue data;

means for gathering application issue data from a plurality of data sources; and

means for presenting the aggregated application issue data visually to the developer of the one or more software applications by presenting a subset of the data in a visual page and presenting a user-selectable page control for accessing one or more pages of remaining data.

25.    (Previously presented) The method according to Claim 21, wherein gathering application issue data from a plurality of data sources comprises gathering the application issue data from a database storing at least one item of user crash report data and a database storing at least one item of test report data.
